

NBS Expands Assembly Capacity – again

Leading EMS provider NBS (www.nbscorp.com) today announced the continuation of its 2009 capacity expansion program with the addition of a 10,000 square foot facility in Santa Clara, CA. The facility is dedicated to NBS' full range of box-build and system integration services and further enhances its ability to deliver end-to-end solutions to a world-wide customer base that spans all market segments.

NBS provides integration services specially designed to support unique and innovative business models. In addition to backplane, cable & harness, and enclosure assembly, the company delivers design and engineering support along with hardware/software integration services. NBS' sophisticated Build to Order (BTO) and Configure to Order (CTO) services further include reverse logistics and RMA capabilities as well as system test and burn in.

NBS Sales and Marketing VP Chris Alessio explains: "Our special ability to support new and unusual business models is based upon the development of customer-specific processes that include track and trace operations and testing of sub-systems, as well as system-level products. We work with both standard and custom-designed enclosures in all form factors, large and small."

Founded in 1999 as a PCB layout specialist, NBS has maintained continuous growth since its inception. This trend is largely attributed to its own unique business model that delivers leading-edge services in design engineering, manufacturing, test and verification to a large and diverse customer-base serving all industry segments and geographies. NBS' 2009 acquisition of CompServ enabled the company to expand

the scope of its services to include advanced supply chain logistics, custom products sourcing and a wide array of test services.
